GEOSPATIAL DATA ANALYSIS REPORT

1. Project Objective

The objective of this project is to analyze regional market indicators across Indian cities, visualize geographical patterns, and identify three promising underserved markets for potential expansion.

2. Dataset Overview

The dataset contains 400 records and 11 columns after cleaning, covering 10 cities and 9 states. It includes geographical coordinates, search demand, competition, income, conversion rate and acquisition cost.

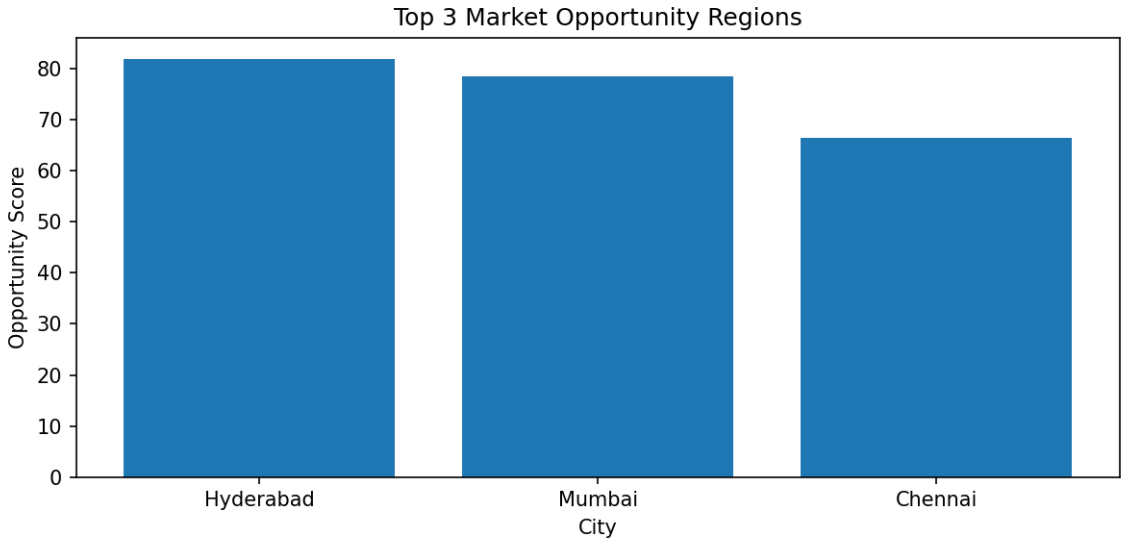
3. Methodology

The dataset was inspected and cleaned. Records were aggregated by city and state. A weighted opportunity score was calculated using demand (35%), low competition (25%), conversion rate (20%), income (10%) and low acquisition cost (10%). Higher scores indicate stronger relative market opportunity among the cities analyzed.

4. Top 3 Potential Regions

City	State	Opportunity Score
Hyderabad	Telangana	82.00
Mumbai	Maharashtra	78.50
Chennai	Tamil Nadu	66.50

5. Market Opportunity Chart



6. Key Findings

Hyderabad, Telangana: Opportunity score 82.00.

Mumbai, Maharashtra: Opportunity score 78.50.

Chennai, Tamil Nadu: Opportunity score 66.50.

7. Conclusion

The analysis provides a comparative view of market opportunities across the cities represented in the dataset. The top three cities are recommended for further market research and expansion assessment. The opportunity scores are analytical indicators, not guaranteed sales or revenue forecasts.

8. Interactive Map

The accompanying India_Geospatial_Analysis.html file contains the interactive geographical visualization of the analyzed cities.
